

Policy goal = a **financial ecosystem** that facilitates economic interactions contributing to the **well-being of communities** and restoring the **health of the planet**

sustainability ↑

RESILIENCE (60%)
Decentralised ways of value creation

Pre-distribution →

← Re-distribution %

ASCENDENCY (40%)
Streamlining, centralisation

Questions for discussion:
 1. Why is the current system unsustainable (not serving this goal)?
 2. What needs to change (in terms of policy leverages)?
